

Technical Bulletin #105 (revision date 10/1/15)

## BURNISHINE DELETION PENS

Burnishine collaborated with major plate manufacturers like Kodak, Fujifilm, and IBF in order to develop deletion pens that work on many of the most popular CtP plates on the market.

### Key Features:

- Unique pens have multiple tips for extra control when making deletions
- High quality components for safe, efficient application
- Durable nylon chiseled tips for long lasting performance
- Pens for baked plates are more efficient and easier to use than honing sticks

**Key Benefits:** Saves time and money! Helps eliminate need to remake plates.

**CTP1000** - deletion pen for use with most unbaked CtP metal plates - 3 tips

**CTP2000** - addition pen works with most unbaked CtP metal plates - 3 tips

**FBP3000** - deletion pen for baked LH-PSE and LH-N13 - 2 tips

**IBF5000** - deletion for IBF Million DV, Negfast, Eco-T, and Million SR - 2 tips

**KP4** - deletion pen for post-baked Electra XD

**\*Effective 10/1/15 Kodak now recommends CTP1000 for unbaked Electra XD, Sonora and Trillian.**

**DIRECTIONS:** Remove ink if necessary. Apply in circular motion with **light pressure**. Wipe with dry cloth/rag during the deletion process. This will allow fresh chemistry and quicker deletion times. When image is deleted, clean area with plate cleaner and resume printing.
